To North lake property Owners:

Treatment of Eurasian Watermilfoil (EM) and Curly Leaved Pondweed (CLPW)

On Monday, June 4, 2018, weather permitting, we will chemically treat EM. Our survey indicated that North Lake (N.L.) has a large amount of EM and smaller amount of CLPW. At a later date significant amounts of EM could appear and require treatment. We will continue to monitor the situation and keep you informed.

The following are the areas that have been permitted for chemical treatment of EM and CLPW and may be treated on June 4, 2018, weather permitting.

1. Ice House Bay
2. Jobie Hole
3. Jobie Sand Bar
4. Schneider Bay
5. Reddelien Road-Big Lake-most areas
6. Cornell Inlet
7. Aicher and Stippich properties on East Shore
8. Little Lake-Didier, Luebke and Wheeler Properties
9. Little Lake-King Property on West Shore
10. Little Lake-Bradt, Tyre and Brink Properties

At this time we only expect to chemically treat EM in Ice House Bay, Jobie Hole, and Schneider Bay, but this could change based on what we see the day of the treatment. Caution signs will be posted near the areas that were treated.

Please follow these restrictions in the area of the lake being treated:

1. **No** swimming for one day
2. Do **not** use the lake water for three weeks for watering vegetable gardens
3. Do **not** use the lake water for watering **grass for one day and flower gardens for two weeks.**
4. There are no restrictions for eating **fish** caught in the treated areas.
5. Keep dogs and other pets **out** of the water for one day.

There are some other areas of the lake that have Eurasian Watermilfoil, but these areas are not significant enough to treat. If you have Eurasian Watermilfoil in front of your property, please pull the plants by the roots and dispose of them in a place where they cannot reenter the lake. Eurasian Watermilfoil is a very dangerous plant because it reproduces so easily and quickly. A single piece of Eurasian Watermilfoil broken off from the main plant by swimmers, boaters or other activity can grow roots and eventually replant itself. If Eurasian Watermilfoil is not controlled, it can choke off/fill up a lake. **NORTH LAKE NEEDS YOUR HELP!** Please participate and remove Eurasian Watermilfoil from your property.

Thank you in advance for your cooperation and support.
