What Can We Learn About Our Negative Impact On Pollinators?

2nd Grade Curriculum
What Can We Learn About Our Negative Impact On Pollinators?
Environmental education is a lifelong learning process that leads to an informed and involved citizenry having the creative problem-solving skills, scientific and social literacy, ethical awareness and sensitivity for the relationship between humans and the environment, and commitment to engage in responsible individual and cooperative actions.

By these actions, environmentally literate citizens will help ensure an ecologically and economically sustainable environment.
The following two week integrated unit is designed for teachers and students to engage in an interdisciplinary study of science and the environment through literacy and math lessons. The lessons and activities are not meant to be done in isolation, but in support of and during literacy and math time.

Each lesson has a suggested structure with room for teachers to infuse more interactive play, discussions, or videos as well as adjust pacing as makes sense for their class. The summative assessment is designed to assess the NGSS, with several formative checks along the way for CCSS, used as the teacher sees fit.

This unit connects to the specific literacy theme(s) of “Growth” or “Learning.” This will be culmination of the larger unit around plant and animal growth. Students will focus on understanding how pollination affects our environment and how humans affect pollinators.
Students in Wisconsin will be able:

- Develop and connect with their sense of place and well-being through observation, exploration and questioning.
- Evaluate relationships and structures of natural and cultural systems and analyze their interdependence.
- Assess how diversity influences health and resilience of natural and cultural systems.
- Students investigate and analyze how change and adaptation impact natural and cultural systems.
- Students engage in experiences to develop stewardship for the sustainability of natural and cultural systems.

This integrated unit uses NGSS and CCSS as the backbone to planning and infusing environmental education standards into the curriculum.

**Wisconsin Standards for Environmental Literacy and Sustainability**

UNIT OUTLINE

Day 1: Plants and Pollination
Day 2: Types of Pollinators
Day 3: Insects
Day 4: In the Beehive
Day 5: Bee Communication
Day 6: What if There Were No Bees?
Day 7: Human Impacts on Pollinators
Day 8: Pollinators Field Experience
Day 9: Call to Action
Day 10: Summative Assessment
Read: Seeds, Bees, and Pollen by Julie K Lundgren

Watch: Pollination or Flight of the Pollinators

Movement Activity: Pollen Here, Pollen There
Students “pollinate” each other’s flowers using Cheetos dust (pollen) and paper bags (flowers).

Discussion: Plant structures
Using the Flower Coloring Page discuss how the different parts of a flower are used in pollination.

Science Journal Prompt:
Pollen is sticky because......
Students should finish the sentence and use evidence to explain why pollen is sticky.

Optional: Create a Flower
This flower could be used instead of a paper bag for the movement activity.
**Activity:** Pollinator Research
Assign groups of 3-4 students a pollinator to research. Groups should fill in the [pollinator information sheet](#) or use [pollination power](#). Have students present their findings to the whole class. Students should collect information about the other types of pollinators in their [pollinator notebook sheet](#) during the presentations.

**Read:** *Stellaluna* by Janell Cannon

**Watch:** *All About Bats*

**Discussion:** Connecting fiction & nonfiction
As a class, discuss and create a T-chart for the fiction and nonfiction components of *Stellaluna*.

**Science Journal Prompt:**
*How do animals help pollination occur?*
Students should reflect on the different types of pollinators and how each helps in the process of pollination.
Read: *A Butterfly is Patient* by Dianna Hutts Aston

Field Experience: Insect Investigations

Join the Retzer Nature Center’s naturalists as we use sweep nets in the meadow, roll logs in the forest, and flip over rocks in search of insects. We will investigate their many adaptations that help support their survival, growth, behavior and reproduction and their important roles in the environment, such as pollination.

Activity: Pollinator Book Creation

Students should use *Book Creator* to describe different aspects of a pollinating insect’s life. Topics should include anatomy, habitat, food, and the life cycle of their insect. *This could be an ongoing research project or as a group activity.*

Discussion: Evolution of insect pollination

Pose the question: *Why do pollinators visit specific types of flowers?* Discuss how plants and pollinators evolved together over time in order to survive.

Science Journal Prompt:

Using the books their classmates have created, have students compare the different anatomical structures used by insects to collect pollen.

Read: *Jump into Science: Honeybees* by Deborah Heiligman

Watch: *How a Bee Becomes a Queen*

**Activity:** *It’s All About the Bees*
Using the activity sheet from the *Wisconsin Agricultural Educators Guide* (WAE Guide), complete the worksheet on the different jobs in the hive.

**Discussion: The best pollinators**
Pose and discuss the questions: *Why are bees good pollinators? What are the specific jobs for bees?*

Read: *The Beeman* By Laurie Krebs

**Activity:** *Get the Buzz on Beekeeping*
Using the worksheet from the WAE Guide, label the parts of a hive and beekeeping equipment. *If possible, have a beekeeper come in and discuss the different aspects of beekeeping.*

**Discussion: The importance of a bee**
Pose and discuss the question: *Why are beekeepers important? Why are bees and pollinators vital to human existence?*

**Science Journal Prompt:**
*Queen bees are important because....*
Students should finish the sentence and use evidence to explain why queen bees are important to a hive.
BEE COMMUNICATION

Read: *Bee Dance* by: Rick Chrustkowski

Watch: *Why Do Honey Bees Dance?*

**Movement Activity:** *Waggle Dance Game*
Use pages 22 and 23 to play this game*. The WAE Guide also has a good fact sheet about the waggle dance, which could be used as an introduction to this activity.

**Science Journal Prompt:**
Honey bees use waggle dancing for....... Students should finish the sentence and explain how waggle dancing communicates the location of food sources to other bees.

*This is a good resource for other activities related to pollination, but because the information is based out of the UK, the species of bees and plants listed as native do not always apply to Wisconsin.*
Activity: *Oh, Honey, Honey*
Using the WAE Guide worksheet, have students sample different flavors of honey and see if they can guess the type of plant the honey came from.

Read: *What If There Were No Bees?* by: Suzanne Slade and *The Buzz on Bees* by Shelly Rotner

Discussion: **Food and pollination**
Using the page *What’s all the Buzz About Pollinators* discuss the reasons that pollinators are disappearing. Pose the question: *What if there were no more pollinators?*
Show some or most of the different types of foods that come from the act of pollination. Discuss what would happen if there were no more pollinators.

**Science Journal Prompt:**

*I can help pollinators by...*
Have students list the ways they can help pollinators through everyday actions.
Discussion: Importance of Pollinators
Pose the question: Are pollinators important? In table groups, have students create a list of reasons they believe pollinators are important. As a class, share their lists.

Activity: Graphing Pollinator Population Data
Present each table group with the 3 data sets showing the trends of the little brown bat, monarch butterfly, and honey bee. (Note: These are sample data sets; feel free to adjust or use different data for your class)
Using the data reflection sheet, have students work to identify trends in the data.
Once the groups have identified that the populations are decreasing, brainstorm possible causes (sickness, draught, human impact, etc.). Have them record their thoughts on an anchor chart to reference during their Call to Action Project on Day 9.

Science Journal Prompt:
Using the activity, have students create graphs to demonstrate the trends from the data sets.
Read: *Mason Meets a Bee* by Dawn Pape

Field Experience: Pollinators Program
Learn about pollination while visiting the native areas at the Retzer Nature Center or the E.B. Shurts Environmental Learning Center. Through indoor and outdoor activities, students will discover how native pollinators support humans.

Discussion: Wasp vs. bee
Discuss the differences between wasps and bees, pointing out that wasps are more likely to sting than bees. This is because bees will die after stinging and only use it as a last resort, whereas wasps can sting multiple times and tend to be more aggressive. *Lesson 1 from An Introduction to Honeybees* can help students visualize the difference in stingers.

Science Journal Prompt:
Bees and wasps are different because.....
Students should compare and contrast the anatomical and behavioral differences between wasps and bees.

Request Plants and Pollinators Online!
Request Importance of Pollinators Online!
Discussion: What can we do?
Pose the question: What can be done to preserve and support pollinators? Discuss how individual actions can help support native pollinator populations.

Activity: Call to Action
Individually or in groups, have students create a PSA to encourage the public about supporting a local pollinator of their choice. This should be done through a collaborative medium* of their choice and should aim to persuade the school and/or community to take action on preserving our native pollinators.

Optional: Enact a Call to Action
As a class, decide on and plan a project (building bat houses, installing native bee gardens, etc.) to preserve the native pollinators. The National Wildlife Federation and the Wisconsin DNR has ideas that could be easily implemented.

* Book Creator, posters, audio recordings, letters to school officials/community members, or commercials.
Assessment: Students will create an individual model demonstrating the process of pollination. Students will work individually to create a diagram with pictures and written descriptions explaining the process of pollination, using any of the pollinators learned about in class.

Extension Opportunity: Students who are interested may build physical representations of their models to be displayed in the school and/or community, demonstrating pollination and its impact on humans.
Books:
- What’s it Like to Be a Bee
- UnBEElievable
- The Case of the Vanishing Honeybees

Activities:
- Graphing:
  - California Academy of Sciences
  - Bee Informed
- Poetry Creation:
  - Celebrate Wildflowers
- Animal Facts and Games:
  - The Buzz About Bees
  - Pollination Relay Race
  - Explore Honey Bees!
  - Bat Pollinator Activity Book
  - Bat Science Experiments
  - Pollination and Seed Dispersal

Pollinator Information Sheets:
- Flowers:
  - Pebble Go
- Bats:
  - Pebble Go
  - Going Batty
  - BatsLive
- Hummingbirds:
  - Pebble Go
  - Hummers
- Insects:
  - Pebble Go
  - Like a Moth to a Flower
  - Honeybees
  - Caterpillars to Butterflies
  - Bumblebee Survival
  - Monarch Population Numbers
  - Monarch Butterflies

  - Pollinators

No endorsement of any business is intended.
Waukesha County, Waukesha School District, and Carroll University have collaborated to create a comprehensive, interdisciplinary K-12 science and environmental education curriculum fully integrated with NGSS Science and Literacy standards.

The goal of this curriculum is to create more scientifically and environmentally literate citizens with the ability to understand and critically assess current scientific and environmental issues, along with a desire and ability to engage in these issues. This project focuses on improving efficiencies through program coordination among partners as well as building comprehensive approaches.
