

# CLEAN WATER

**ONE STEP AT A TIME.**

## Keep Rivers and Lakes Clean

Water that runs off our roads, rooftops and lawns runs into our lakes, rivers and streams. It may carry pollutants like dog waste, fertilizers, leaves and grass clippings.

## Actions I Can Take To Protect Rivers and Lakes

- Pick up after my dog and dispose of the waste
- Wash the car on the grass or at the car wash—not on the driveway
- Install a rain barrel to collect runoff
- Sweep leaves and grass clippings out of the street
- Get the car fixed so it isn't leaking oil
- Test soil before fertilizing and use only what is needed
- Plant a rain garden to capture runoff
- Cover bare soil with mulch or plantings
